HISTORICAL RETURN DIFFERENTIAL - EQUAL VS. CAP WEIGHTED

ANNUAL RELATIVE WEIGHTS

ANNUAL RELATIVE RETURNS

EQUAL VS. CAP WEIGHTED YEARLY ATTRIBUTION

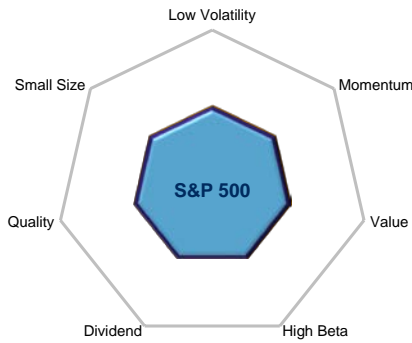

- Consumer Discretionary and Health Care were the biggest drivers of Equal Weight's underperformance, since larger stocks within the sector outperformed smaller ones.
- Info Tech also detracted from performance, given Equal Weight's heavy underweight to the sector.

KEY TO FACTOR SCORINGS FOR INDICES

Factor Definitions

Each constituent of the S&P 500 index is provided with a factor "score" for each of Beta, Volatility, Momentum, Dividend, Size, Value and Quality.

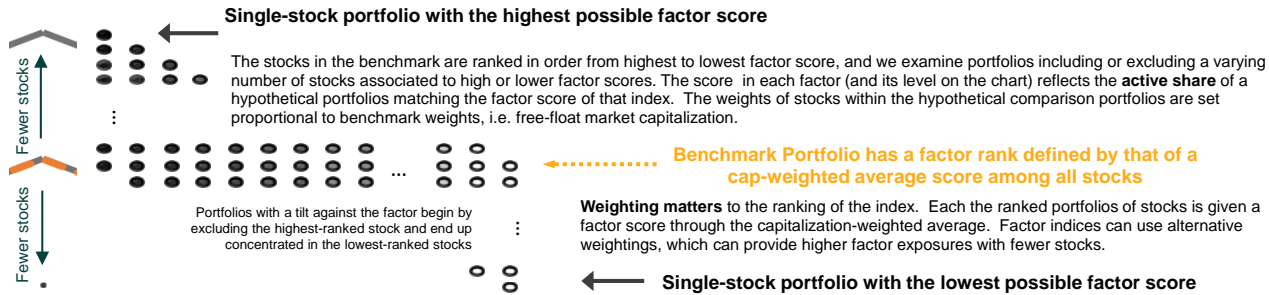

| Factor | Measurement at single-stock level |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Volatility | Trailing 12-month daily return volatility |
| Momentum | Twelve-month price change as of one month ago ("13 minus 1 momentum"), divided by the daily volatility during the twelve-month period that ended one month ago. For more details, see the S&P Momentum methodology |
| Value | The average of (normalized) earnings to price ratio, book to price ratio and sales to price ratio. For more details, see the S&P Value methodology. |
| Beta | Trailing 1 year beta of stock daily returns to the benchmark's return. |
| Dividend | Trailing 12-month dividend |
| Quality | The average of the (normalized) return on equity, the accruals ratio and the financial leverage ratio. For more details, see the S&P Quality methodology. |
| Size | Free-float market capitalization |

Index Factor Ranking and Factor Diagram Scaling

Index Scores

Each index is provided a score in each factor from -100% to +100% based on how much of the total capitalization of the benchmark would must be excluded in order to provide a portfolio of stocks with similar exposure to that factor. This is done by examining a ranked series of hypothetical cap-weighted portfolios, including or excluding an increasing number of the stocks with the highest or lowest scores. An illustration of the process may be found at this [link](#).

Notes On Additional Index Statistics

| Statistic | Notes |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Price/Earnings (P/E) | Price per share as of observation date divided by earnings per share, calculated by adding the last twelve calendar months' quarterly reported earnings per share. |
| Price/Book (P/B) | Price per share as of observation date divided by latest annual reported book value per share. |
| Price/Sales (P/S) | Price per share as of observation date divided by sales per share, calculated by adding twelve calendar months' quarterly reported sales per share. |
| Return on Equity (ROE%) | Earnings per share divided by latest annual reported book value per share. |
| Financial Leverage Ratio | A company's total debt divided by its latest annual reported book value, calculated as book value per share multiplied by common outstanding shares. Debt, book value per share, and common outstanding shares are latest annual reported values. |
| RSI - 30 Day | RSI is an indicator of the speed and change of price movements and oscillates between zero and 100. RSI is considered overbought when above 70 and oversold when below 30. RS is the average gain divided by average loss over the past 30 days. Then RSI is equal to 100 minus 100 divided by 1+RS. |

S&P 500 Equal Weight Sector Average Correlation and Dispersion (Trailing 12-Month Volatility)

EQUAL WEIGHT VS. CAP WEIGHT CORRELATION

NOTES

- The charts above decomposed volatility into its two main components: dispersion and correlation. The dispersion and correlation data points are each sector's average monthly value over the trailing 12 months. Trailing annualized volatility is included in parentheses. Index dispersions shown based on calendar month stock-level index-weighted dispersion. Index correlation based on single stock daily total returns during each calendar month. See "Implications of Sector Dispersion" for more information.
- See "At the Intersection of Diversification, Volatility and Correlation" for details on the relationship between correlation and dispersion.
- See "Dispersion: Measuring Market Opportunity" for the definition of index dispersion and more information on the uses of dispersion.
